IMPLEMENTATION PLAN

Village of Paw Paw Electric System Asset Management Plan

Aug, 2017

This implementation plan is intended to organize and schedule the recommendations detailed in the 2017 Village of Paw Paw Electric Asset Management Plan. The above referenced project created a model of the Village's existing electrical distribution system and utilized this model to study a variety of issues including equipment condition and criticality, fuse coordination, capital improvements, and funding. The following tasks outline the major milestones and completion dates for each recommendation resulting from the system study.

1. Recommendation: Electric System Asset Management Program - An asset management program is distinct from the asset management plan (AMP) on which it is based. A management program is the management plan implemented throughout the system. This program should be an active and changing approach which requires ongoing adjustments and updates to correctly manage the system and its assets.

Champion: Village Manager

Task Number	Tasks	Completion Date	Status
1.1	Village Council accepts and adopts plan to establish program	Nov-17	
1.2	Communicate AMP to staff and customers including desired LOS, condition, CIP and rate designs	Jan-18	
1.3	Establish GIS hardware and software for the utility to manage system information	May-18	
1.4	Adopt a work order and preventative maintenance software application to document workflow	Jun-18	
1.5	Review status of major recommendations quarterly with staff	Quarterly	
1.6	Report on status of PM and work orders monthly to Village Council	Monthly	
1.7	Update Capital Improvement Plan	2020	
1.8	Review and update system asset management program	2020	
1.0	Update System Model	2022	
1.9 Recommendation	 Coordination Plan - This recommendation's goal is to coordinate the fuses throughout the electric system using philosophy outlined in the 2017 System Coordination Study authored by GRP Engineering. In general, fuses s a time. Start with the mainline fuses and change or replace fuse cutouts with 600A single phase disconnects. 	the protective device coor hould be replaced in one ci	rcuit at
Recommendation	 Coordination Plan - This recommendation's goal is to coordinate the fuses throughout the electric system using philosophy outlined in the 2017 System Coordination Study authored by GRP Engineering. In general, fuses so a time. Start with the mainline fuses and change or replace fuse cutouts with 600A single phase disconnects. done next. Once a tap is started every fuse should be replaced before moving to the next tap. 	the protective device coor hould be replaced in one ci	rcuit at
Recommendation	n: Coordination Plan - This recommendation's goal is to coordinate the fuses throughout the electric system using philosophy outlined in the 2017 System Coordination Study authored by GRP Engineering. In general, fuses so a time. Start with the mainline fuses and change or replace fuse cutouts with 600A single phase disconnects.	the protective device coor hould be replaced in one ci	rcuit at
Recommendation Champion	 Coordination Plan - This recommendation's goal is to coordinate the fuses throughout the electric system using philosophy outlined in the 2017 System Coordination Study authored by GRP Engineering. In general, fuses so a time. Start with the mainline fuses and change or replace fuse cutouts with 600A single phase disconnects, done next. Once a tap is started every fuse should be replaced before moving to the next tap. Electric Utility Manager 	the protective device coor hould be replaced in one ci Taps on the mainline may t Completion	rcuit at hen be
Recommendation Champion Task Number	 A. Coordination Plan - This recommendation's goal is to coordinate the fuses throughout the electric system using philosophy outlined in the 2017 System Coordination Study authored by GRP Engineering. In general, fuses so a time. Start with the mainline fuses and change or replace fuse cutouts with 600A single phase disconnects. done next. Once a tap is started every fuse should be replaced before moving to the next tap. A. Electric Utility Manager 	the protective device coor hould be replaced in one ci Taps on the mainline may Completion Date	rcuit at hen be
Recommendation Champion Task Number 2.1	 Coordination Plan - This recommendation's goal is to coordinate the fuses throughout the electric system using philosophy outlined in the 2017 System Coordination Study authored by GRP Engineering. In general, fuses so a time. Start with the mainline fuses and change or replace fuse cutouts with 600A single phase disconnects. done next. Once a tap is started every fuse should be replaced before moving to the next tap. Electric Utility Manager Tasks Order quantity and type of fuses likely needed to complete each circuit 	the protective device coor hould be replaced in one ci Taps on the mainline may t Completion Date Mar-18	rcuit at hen be
Recommendation Champion Task Number 2.1 2.2	 Coordination Plan - This recommendation's goal is to coordinate the fuses throughout the electric system using philosophy outlined in the 2017 System Coordination Study authored by GRP Engineering. In general, fuses so a time. Start with the mainline fuses and change or replace fuse cutouts with 600A single phase disconnects. done next. Once a tap is started every fuse should be replaced before moving to the next tap. Electric Utility Manager Tasks Order quantity and type of fuses likely needed to complete each circuit Coordinate with and gain approval from I&M regarding proposed recloser settings 	the protective device coor hould be replaced in one ci Taps on the mainline may t Completion Date Mar-18 Apr-18	rcuit at hen be
Recommendation Champion Task Number 2.1 2.2 2.3	 a. Coordination Plan - This recommendation's goal is to coordinate the fuses throughout the electric system using philosophy outlined in the 2017 System Coordination Study authored by GRP Engineering. In general, fuses since a time. Start with the mainline fuses and change or replace fuse cutouts with 600A single phase disconnects. done next. Once a tap is started every fuse should be replaced before moving to the next tap. a. Electric Utility Manager Tasks Order quantity and type of fuses likely needed to complete each circuit Coordinate with and gain approval from I&M regarding proposed recloser settings Identify order to complete inspections and changes 	the protective device coor hould be replaced in one ci Taps on the mainline may Completion Date Mar-18 Apr-18 Apr-18	rcuit at hen be
Recommendation Champion Task Number 2.1 2.2 2.3 2.4	 a time. Coordination Plan - This recommendation's goal is to coordinate the fuses throughout the electric system using philosophy outlined in the 2017 System Coordination Study authored by GRP Engineering. In general, fuses so a time. Start with the mainline fuses and change or replace fuse cutouts with 600A single phase disconnects. done next. Once a tap is started every fuse should be replaced before moving to the next tap. a: Electric Utility Manager Tasks Order quantity and type of fuses likely needed to complete each circuit Coordinate with and gain approval from I&M regarding proposed recloser settings ldentify order to complete inspections and changes Update settings on reclosers per recommendations 	the protective device coor hould be replaced in one ci Taps on the mainline may to Completion Date Mar-18 Apr-18 Apr-18 Jun-18	rcuit at hen be

 Recommendation 	a: Capital Improvement Plan - This recommendation is an outline of the needed capital projects in order to keep the system in good working order. These projects are based on the operating philosophy and desired levels of service Paw Paw System Study. A typical project timeline is listed below for 2018 projects. the remaining projects are exp	e outlined in the 2017 Vi	illage of			
	same process.					
Champion: Village Manager						
Task Number	Tasks	Completion Date	Status			
3.1	2018 Projects:					
	Review and approve scope, schedule and tentative budget for 2018 projects	Dec-17				
	Write RFP and engage engineering firm for project designs (8 weeks)	Feb-18				
	Finalize project plans and contract documents (22 weeks)	Jul-18				
	Bid Projects (4.5 weeks)	Aug-18				
	Award contract	Sep-18				
	Begin construction	Sep-18				
	Final completion (Aproximatly 22 weeks)	Apr-19				
3.2	2019 Projects:					
-	Follow above project outline	Apr-20				
3.3	2020 Projects:					
	Follow above project outline	Apr-21				
3.4	2021 Projects (New Substation and Transmission Line):					
	Follow above project outline but allow for additional time for design and construction	Apr-22				
3.5	2022 Projects:					
	Follow above project outline	Apr-23				
	a: Arc-Flash Program - This recommendation's goal is to establish a standard for what Personal Protective Equipme	nt (PPE) is required to p	orotect			
Champior	n: Electric Utility Manager					
Task Number	Tasks	Completion Date	Status			
4.1	Review arc-flash recommendations from GRP report and NESC Table 410-1	Sep-17				
4.2	Establish procedure for verifying what PPE is required at a particular location	Nov-17				
4.3	Educate Village staff and practice the established procedures	Ongoing				
4.4	Reevaluate arc-flash recommendations after changes to recloser settings	Dec-18				

	n: Equipment Maintenance Program - This program's goal is to identify the preventative maintenance required to prolong the line Electric Utility Manager	ife of existing	system
Task Number	Tasks	Completion Date	Status
5.1	Review manufacturer recommendations as well as the recommendations in the 2017 Village of Paw Paw System Study	Nov-17	
5.2	Create maintenance processes and checklists for each type equipment in the system (reclosers, switches, capacitor banks,	Jan-18	
5.3	Create schedule and tracking process for maintenance and integrate into Asset Management Program and GIS software	Apr-18	
6. Recommendation	n: GIS Geodatabase - Integrate GIS information into Village software		
Champior	n: Electric Utility Manager		
Task Number	Tasks	Completion Date	Status
6.1	Wightman to provide GIS geodatabase to Village	Jul-17	
6.2	Wightman to provide overview of GIS data structure and use	Oct-17	
6.3	Ongoing support and hosting of GIS geodatabase	Oct-17	
6.4	Hosting of asset management plan documents and reports on public website	May-18	
	n: Rate Design and Financial Projections - Identifying financial challenges and align rates by class to their respective costs of	service	
Champior	n: Village Manager		
Task Number	Tasks	Completion Date	Status
7.1	Present financial projections and proposed rate design to councile for approval	Aug-17	
7.2	Implement rate changes and communicate reasons for changes to stakeholders and staff	Sep-17	
7.3	Start prosses of redesigning future rates for the next three to five years	Sep-21
